Inside the Earth

What does the inside of the earth look like? This diagram shows what many geologists think. Please read the description of each layer of the earth. Then use the vocabulary words to label the diagram.

Crust: The outermost layer of the earth. It is made of solid rock. The crust is about 100 kilometers thick. The thickness of the crust varies from about 5 kilometers under the oceans to about 70 kilometers under the continents.

Mantle: The layer below the crust. It is made of solid rock. The mantle is about 2,900 kilometers thick. The temperature in the mantle is about 1,000 degrees Celsius. The mantle is divided into the upper mantle and the lower mantle.

Core: The innermost layer of the earth. It is made of metal. The core is about 7,000 kilometers thick. The temperature in the core is about 5,000 degrees Celsius. The core is divided into the outer core and the inner core.

Labels: Crust, Mantle, Core, Outer Core, Inner Core.
